System Level Design with Rosetta (Systems on Silicon)

Perry Alexander

System Level Design with Rosetta (Systems on Silicon) Perry Alexander

The steady and unabated increase in the capacity of silicon has brought the semiconductor industry to a watershed challenge. Now a single chip can integrate a radio transceiver, a network interface, multimedia functions, all the "glue" needed to hold it together as well as a design that allows the hardware and software to be reconfigured for future applications. Such complex heterogeneous systems demand a different design methodology. A consortium of industrial and government labs have created a new language and a new design methodology to support this effort. Rosetta permits designers to specify requirements and constraints independent of their low level implementation and to integrate the designs of domains as distinct as digital and analog electronics, and the mechanical, optical, fluidic and thermal subsystems with which they interact.

In this book, Perry Alexander, one of the developers of Rosetta, provides a tutorial introduction to the language and the system-level design methodology it was designed to support.

- * The first commercially published book on this system-level design language
- * Teaches you all you need to know on how to specify, define, and generate models in Rosetta
- * A presentation of complete case studies analyzing design trade-offs for power consumption, security requirements in a networking environment, and constraints for hardware/software co-design

From reader reviews:

Billy Simpson:

Why don't make it to be your habit? Right now, try to prepare your time to do the important act, like looking for your favorite e-book and reading a publication. Beside you can solve your trouble; you can add your knowledge by the reserve entitled System Level Design with Rosetta (Systems on Silicon). Try to make the book System Level Design with Rosetta (Systems on Silicon) as your close friend. It means that it can be your friend when you truly feel alone and beside those of course make you smarter than before. Yeah, it is very fortunate for you. The book makes you considerably more confidence because you can know every little thing by the book. So, let us make new experience and knowledge with this book.

Larry Parker:

Book is to be different for each and every grade. Book for children until adult are different content. As you may know that book is very important for us. The book System Level Design with Rosetta (Systems on Silicon) has been making you to know about other knowledge and of course you can take more information. It is rather advantages for you. The e-book System Level Design with Rosetta (Systems on Silicon) is not only giving you more new information but also to be your friend when you truly feel bored. You can spend your own personal spend time to read your reserve. Try to make relationship with all the book System Level Design with Rosetta (Systems on Silicon). You never sense lose out for everything should you read some books.

Loren Hatfield:

This book untitled System Level Design with Rosetta (Systems on Silicon) to be one of several books in which best seller in this year, here is because when you read this e-book you can get a lot of benefit in it. You will easily to buy this book in the book store or you can order it through online. The publisher of the book sells the e-book too. It makes you more readily to read this book, since you can read this book in your Smartphone. So there is no reason for you to past this book from your list.

Gerald Velasco:

People live in this new day of lifestyle always aim to and must have the extra time or they will get lots of stress from both day to day life and work. So, if we ask do people have extra time, we will say absolutely indeed. People is human not a robot. Then we inquire again, what kind of activity are there when the spare time coming to an individual of course your answer will probably unlimited right. Then ever try this one, reading guides. It can be your alternative throughout spending your spare time, the actual book you have read is usually System Level Design with Rosetta (Systems on Silicon).
