Groundwater Assessment, Modeling, and Management

Your Guide to Effective Groundwater Management

Groundwater Assessment, Modeling, and Management discusses a variety of groundwater problems and outlines the solutions needed to sustain surface and ground water resources on a global scale. Contributors from around the world lend their expertise and provide an international perspective on groundwater management. They address the management of groundwater resources and pollution, waste water treatment methods, and the impact of climate change on groundwater and water availability (specifically in arid and semi-arid regions such as India and Africa). Incorporating management with science and modeling, the book covers all areas of groundwater resource assessment, modeling, and management, and combines hands-on applications with relevant theory.

For Water Resource Managers and Decision Makers

The book describes techniques for the assessment of groundwater potential, pollution, prevention, and remedial measures, and includes a new approach for groundwater modeling based on connections (network theory). Approximately 30 case studies and six hypothetical studies are introduced reflecting a range of themes that include: groundwater basics and the derivation of groundwater flow equations, exploration and assessment, aquifer parameterization, augmentation of aquifer, water and environment, water and agriculture, the role of models and their application, and water management policies and issues. The book describes remote sensing (RS) applications, geographical information systems (GIS), and electrical resistivity methods to delineate groundwater potential zones.

It also takes a look at:

- Inverse modeling (pilot-points method)
- Simulation optimization models
- Radionuclide migration studies through mass transport modeling
- Modeling for mapping groundwater potential
- Modeling for vertical 2-D and 3-D groundwater flow

Groundwater Assessment, Modeling, and Management explores the management of water resources and the impact of climate change on groundwater. Expert contributors provide practical information on hydrologic engineering and groundwater resources management for students, researchers, scientists, and other practicing professionals in environmental engineering, hydrogeology, irrigation, geophysics, and environmental science.

From reader reviews:

Ronald Moffatt:

People live in this new time of lifestyle always attempt to and must have the spare time or they will get wide range of stress from both day to day life and work. So , once we ask do people have spare time, we will say absolutely yes. People is human not really a robot. Then we ask again, what kind of activity do you have when the spare time coming to you actually of course your answer may unlimited right. Then do you try this one, reading publications. It can be your alternative throughout spending your spare time, the actual book you have read is definitely Groundwater Assessment, Modeling, and Management.

Herman Deans:

Playing with family within a park, coming to see the water world or hanging out with good friends is thing that usually you will have done when you have spare time, after that why you don't try matter that really opposite from that. One activity that make you not feeling tired but still relaxing, trilling like on roller coaster you are ride on and with addition details. Even you love Groundwater Assessment, Modeling, and Management, it is possible to enjoy both. It is great combination right, you still wish to miss it? What kind of hang-out type is it? Oh come on its mind hangout folks. What? Still don't buy it, oh come on its identified as reading friends.

Joseph Benoit:

Groundwater Assessment, Modeling, and Management can be one of your starter books that are good idea. We all recommend that straight away because this reserve has good vocabulary which could increase your knowledge in vocabulary, easy to understand, bit entertaining but delivering the information. The article author giving his/her effort to place every word into pleasure arrangement in writing Groundwater Assessment, Modeling, and Management but doesn't forget the main place, giving the reader the hottest and also based confirm resource data that maybe you can be one of it. This great information can drawn you into fresh stage of crucial pondering.

Belen Riedel:

Do you like reading a book? Confuse to looking for your preferred book? Or your book ended up being rare? Why so many question for the book? But just about any people feel that they enjoy to get reading. Some people likes examining, not only science book but novel and Groundwater Assessment, Modeling, and Management or even others sources were given information for you. After you know how the great a book, you feel would like to read more and more. Science publication was created for teacher as well as students especially. Those ebooks are helping them to bring their knowledge. In various other case, beside science publication, any other book likes Groundwater Assessment, Modeling, and Management to make your spare time a lot more colorful. Many types of book like here.
