The state-of-the-art concept-based, student-centered introduction to nursing: first of two volumes, focused on 30 essential concepts associated with patients' psychosocial and reproductive concerns; with the nurse's professional domain; and with the nurse's roles and responsibilities in the broader healthcare system.

Instead of memorizing thousands of alterations, students gain in-depth knowledge of selected alterations, and learn how to apply that knowledge as new challenges and client presentations come their way. The second of two volumes, this fully-updated Volume II focuses on 30 crucial concepts every nurse needs to master. It begins with several Psychosocial Modules covering addiction, cognition, culture/diversity, development, family, grief/loss, mood/affect, self, spirituality, stress/coping, and violence. After focusing on reproduction, it turns to the nursing domain, covering assessment, caring interventions, clinical decision making, collaboration, communication, care management, professional behaviors, and client teaching/learning. Finally, it turns to the nurse's broader roles, focusing on accountability, advocacy, evidence-based practice, healthcare systems, health policy, informatics, legal issues, quality improvement, and safety. The text's 30 concepts are illuminated with over 80 exemplars covering the entire lifespan.
