This is a revised edition of the first printing which appeared in 2002. The book is based on lectures at the University of Bergen, Norway. Over the years these lectures have covered many different aspects and facets of the wonderful field of geometry. Consequently it has never been possible to give a full and final account of geometry as such, at an undergraduate level: A carefully considered selection has always been necessary. The present book constitutes the main central themes of these selections. One of the groups I am aiming at, is future teachers of mathematics. All too often the texts dealing with geometry which go into the syllabus for teacher-students present the material in ways which appear pedantic and formalistic, suppressing the very powerful and dynamic character of this old field, which at the same time so young. Geometry is a field of mathematical insight, research, history and source of artistic inspiration. And not least important, an integral part of our common cultural heritage.
