Physics and Fractal Structures Jean-Francois Gouyet

The structures of physics, in general, are studied by using simplified geometry on objects that are actually irregular and highly complex. The complex morphology and dynamics of many phenomena are lost when this is done. Benoît B. Mandelbrot, author of the preface, has spent 20 years studying the phenomena required to model these structures in all their dimensions. These structures are called fractals, and are characterized by their invariance of scale: each figure is composed of figures which are virtually identical and which are in turn composed of virtually identical figures, and so on indefinitely. Fractals are the result of 70 years of research in many fields; what they reveal has pertinence to physics of materials, mechanics of fluids, functional anatomy, plant morphology, geomorphology, astrophysics, and other disciplines. This book highlights the structures of fractals in related disciplines: turbulence, chaos, fracture, percolation, diffusion fronts, aggregation, phase transitions, particle trajectories. The author describes in detail the dynamic aspects of transport phenomena in the field of fractals. Intended for students of physics and chemistry in their second or third year, this book is also addressed to researchers and engineers interested in the trends of contemporary physics as they relate to real applications. An extensive bibliography directs the reader to additional material on specific topics.

From reader reviews:

Genoveva Johnson:

Do you have favorite book? Should you have, what is your favorite's book? Book is very important thing for us to understand everything in the world. Each reserve has different aim or maybe goal; it means that book has different type. Some people truly feel enjoy to spend their time and energy to read a book. These are reading whatever they take because their hobby is reading a book. How about the person who don't like looking at a book? Sometime, particular person feel need book after they found difficult problem or exercise. Well, probably you will want this Physics and Fractal Structures.

Anna Harlow:

This Physics and Fractal Structures book is simply not ordinary book, you have after that it the world is in your hands. The benefit you obtain by reading this book is definitely information inside this reserve incredible fresh, you will get info which is getting deeper an individual read a lot of information you will get. This Physics and Fractal Structures without we recognize teach the one who reading through it become critical in contemplating and analyzing. Don't always be worry Physics and Fractal Structures can bring any time you are and not make your bag space or bookshelves' become full because you can have it in your lovely laptop even mobile phone. This Physics and Fractal Structures having good arrangement in word and layout, so you will not truly feel uninterested in reading.

Gertrude Barrett:

Are you kind of stressful person, only have 10 or 15 minute in your moment to upgrading your mind expertise or thinking skill perhaps analytical thinking? Then you are experiencing problem with the book when compared with can satisfy your limited time to read it because this time you only find book that need more time to be study. Physics and Fractal Structures can be your answer mainly because it can be read by anyone who have those short free time problems.

Nona Smith:

Is it a person who having spare time subsequently spend it whole day through watching television programs or just laying on the bed? Do you need something totally new? This Physics and Fractal Structures can be the solution, oh how comes? It's a book you know. You are thus out of date, spending your extra time by reading in this brand new era is common not a nerd activity. So what these ebooks have than the others?
