Theory and Application of Mathieu Functions N. W. McLachlan

After preliminary historical remarks, Profesor McLachlan presents the theory in chapters covering such topics as computation of Mathlieu functions; computation of characteristic numbers and coefficients; numerical solution of equations (with worked examples, etc.); Hill's equation; solutions in series of Bessel functions; wave equations in elliptical coordinates; zeros of the Mathlieu and modified Mathlieu functions of integral order; etc. Also included are a discussion of the general orthogonality properties (vital for fitting solutions to boundary conditions) and a full account of asymptotic expansions. The second part of the book deals with applications of Mathlieu functions to the study of loud speakers, radio frequency modulation, lateral vibration of long columns; subharmonics in dynamic systems; oscillations of elliptical membranes, plates and water in elliptical lakes; electrical and thermal diffusion; electromagnetic wave guides; scattering of sound and electromagnetic waves by long elliptical cylinders, slits, and ribbons; and the like.
