## **Papers in Game Theory (Theory and Decision Library) J.C. Harsanyi**

This volume contains twelve of my game-theoretical papers, published in the period of 1956-80. It complements my *Essays on Ethics, Social Behavior, and Scientific Explanation*, Reidel, 1976, and my *Rational Behavior and Bargaining Equilibrium in Games and Social Situations*, Cambridge University Press, 1977. These twelve papers deal with a wide range of game-theoretical problems. But there is a common intellectual thread going through all of them: they are all parts of an attempt to generalize and combine various game-theoretical solution concepts into a unified solution theory yielding one-point solutions for both cooperative and noncooperative games, and covering even such 'non-classical' games as games with incomplete information. SECTION A The first three papers deal with bargaining models. The first one discusses Nash's two-person bargaining solution and shows its equivalence with Zeuthen's bargaining theory. The second considers the rationality postulates underlying the Nash-Zeuthen theory and defends it against Schelling's objections. The third extends the Shapley value to games without transferable utility and proposes a solution concept that is at the same time a generalization of the Shapley value and of the Nash bargaining solution.
